LINEA CABINETRY

Linea, where form seamlessly meets function to redefine the standard of dental cabinets. Crafted with precision and designed for optimal performance, Linea stands as a testament to innovation and sophistication in dental cabinetry.

Linea cabinets are specifically designed to enhance the efficiency of patient turnover for dentists, promising a seamless experience that keeps you organized at all times. The thoughtfully crafted layout and intelligent storage solutions ensure quick and easy access to instruments and materials, streamlining workflows and minimizing downtime between patients.

With Linea, the focus is on optimizing the dental practice environment to support efficient processes, ultimately contributing to an improved overall experience for both staff and patients. Stay organized, work efficiently, and elevate your dental practice with Linea cabinets.

Linea's contemporary and sleek design is complemented by the use of high-quality textured and non-textured thermo-fused laminate, and 1/2" solid surface worksurface. This not only enhances the visual appeal of your dental practice but also ensures the longevity of your cabinets, with surfaces that resist wear and tear.

Linea cabinets showcase brushed nickel handles that add a touch of elegance to the design. These handles provide a modern and refined look.

Complementing this stylish touch is the integration of a stainless-steel sink and faucet, combining durability with a sleek aesthetic.

Featuring soft-close drawer glides, these cabinets ensure a quiet and smooth closing motion, adding a touch of luxury to the user experience. Taking the concept of cohesion even further, the face of the drawers seamlessly incorporates matching wood grain, creating a visually stunning effect that gives the impression of one continuous, elegantly crafted piece of furniture.

The inclusion of a steel toe kick ensures robust support and protection against daily wear, emphasizing the cabinets' resilience in a high-traffic environment.

Linea cabinets feature strategically placed grommets, ensuring clean and organized wire management, which help facilitate the integration of computers and electronic devices.

The undermounted LED task light illuminates the worksurface, providing clarity while getting any type of work done.
